

NEW WHEATSTONE A-7000

ANALOG AUDIO CONSOLE

 *Wheatstone*

THE NEW WHEATSTONE A-7000, our top-of-the-line analog radio console, is intended for number one stations that need a lot of function and plenty of flexibility. Designed to compliment our D-Series digital consoles, the A-7000 boasts the same open architecture control surface as our popular D-8000 and D-4000 on-air boards, allowing modules to be plugged in any order for easy reconfiguration as format needs change. With **SUPERB technical performance and a host of POWERFUL FEATURES**, the A-7000 is sure to satisfy your most demanding program and production staff!

- Completely modular hot-swap design—any module in any slot
- Four stereo mix buses, two mono sums and four MXMs
- Six pointer-style true VU meters; switched pair meters any signal
- Inputs available with 3-band EQ and dual sends
- Available with individual channel Bus-Minus® IFB feeds
- Handle up to four callers using SPD-7000 phone modules
- Full monitor source functions with built-in CUE, HDPN and SOLO
- Multiple studio outputs, each with talkback interrupt
- A/B source select w/fully independent logic and machine control
- Mode selection on all stereo inputs and monitor modules
- Low profile drop-through counter design
