Crawford Broadcast's New Birmingham Facility Receives Wheatstone Networked Audio and Control System

NEW BERN (November 14, 2006)–The new Birmingham facility has received shipment of five Generation 6 control surfaces, 5 Studio Satellite cages and a central Bridge router in TOC along with six complete prewiring packages. In addition, ten rooms of Tek Line studio furniture were delivered to the new facility, which houses stations: WDJC-FM, WYDE-AM, WXJC-AM, WLGD-AM and WPHC-FM.

Wheatstone Generation/Bridge networked audio and control systems were also integrated into Crawford Broadcast's Detroit and Denver facilities. Cris Alexander provided an overview of the various scopes of the three projects: "In some ways, the Birmingham project will be easier than the Detroit and Denver Wheatstone projects. In Birmingham, the Bridge router and control surfaces can be installed and wired up without working around existing equipment, infrastructure and people. Not so in Detroit and Denver. In those markets, the Bridge had to be installed in the middle of existing equipment and infrastructure and then 'cut in' during an overnight, one station at a time."

Started in 1959, Crawford Broadcasting proudly refers to itself "a pioneer in Christian broadcasting." The company operates 27 AM and FM radio stations in 12 U.S. markets,

Springs.

About Wheatstone

WHEATSTONE CORPORATION is the leading supplier of digital control surfaces, digital audio networks, and AOIP automation audio and control interfaces for the broadcast industry. Located in New Bern, North Carolina, USA, Wheatstone Corporation designs and manufactures professional broadcast audio equipment under the WHEATSTONE, AUDIOARTS ENGINEERING, and VORSIS™ brand names. The company also markets the BRIDGE digital audio network router and several lines of studio furniture, broadcast accessories, as well as a unique studio interface wiring system.
