Detroit's Greektown Casino-Hotel Gears Up with iXO Audio System

NEW BERN (February 12, 2008)– With phase-one of the expansion already complete, the Greektown Casino and Hotel is preparing to open the doors in December 2008 to their new luxury casino and accommodations complex. The development is comprised of 100,000 square feet of gaming space, a 1,400 seat live theatre, and a 30-story, 400-room hotel that contains 10 banquet/meeting rooms and two world-class restaurants.

Greektown Casino and Hotel wanted a DSP audio system that would provide the facility with the utmost flexibility in routing and processing audio throughout the development. Combining ease of system programming and expansion, along with the hot-swappable card cage design were key factors in deciding to choose the iXO.

The project involves the renovation and expansion of the existing facility along with new construction of the hotel. Greektown needed a DSP system that could be easily reconfigured during the various phases of construction, which they are able to achieve with the iXO.
