Wheatstone Commercial's iXO is Awarded PAR Audio Excellence Award

New Bern, NC (July 25, 2008) — Pro Audio Review selected the iXO DSP audio system as an official recipient of the 2008 *PAR Excellence* award at this year's InfoComm show in Las Vegas. The PAR award covers a number of niches within pro audio including broadcast production/post, live audio, and the winning category for the iXO - contracting/presentation audio. The iXO is an expandable DSP audio platform that provides router based audio mixing and signal processing via an intuitive software interface. The basis of the iXO system is the iXO-MF Mainframe: a four rack-unit high card cage with internal power supply which has fifteen universal front loading card slots and can accommodate any of the input, output, logic I/O, and DSP cards that are available in the iXO product line. Input and output cards are equipped with 8 audio channels each. All iXO DSP card variations can accommodate up to 32 channels of audio.
